

# TOTAL RADIATION SERVICES WHEN YOU NEED TO BE SURE

## THE COSTS OF NON-COMPLIANCE

Unsafe handling of radiation sources may lead to unnecessary exposure of staff and members of the public, and contamination of the environment. In these instances the legal and financial repercussions for your organisation can be disastrous, coming back to haunt you years after the fact e.g. the loss of a radioactive source. While keeping people safe is always a priority, non-compliance with government regulation also increases the risk of contamination, accidents, downtime and compensation payouts that can lead to major financial losses.

## ENVIRONMENTAL SERVICES

Routine monitoring and surveillance

- Contaminated land surveys
- General industrial operations
- Radioactive waste management
- Testing for naturally occurring radioactive materials (NORM)
- Development of radiation management plans
- Development of waste management plans
- Assistance with regulatory compliance
